

Citrix Access Gateway

SECURE AND SEAMLESS APPLICATION ACCESS

Organizations today face increasing pressure to deliver business applications and data from anywhere, especially as trends such as globalization, mobility, offshoring and home-based working continue to move users further away from the data center.

CITRIX ACCESS GATEWAY

Citrix Access Gateway™ is the only family of SSL VPN appliances that securely delivers access to any application with policy-based SmartAccess control. Provide your users easy-to-use, secure access to all of the applications and data they need to be productive, and cost-effectively extend access to applications while maintaining security through application-level policies.

With Access Gateway, organizations are empowered to cost-effectively meet the access demands of workers in any location — enabling flexible work options, easier outsourcing and non-employee access, and business continuity readiness — while ensuring the highest level of information security.

THE BEST ACCESS EXPERIENCE

Access Gateway delivers the same rich desktop experience users enjoy when connected to the local network. Always-on access automatically and seamlessly reconnects users when they change locations and devices or lose connectivity, reducing frustration and improving productivity. A Web-based landing page delivers quick and easy access to key resources, and users can choose from a wide variety of devices, including mobile devices.

STRENGTHEN DATA SECURITY

Integrated end-point scanning ensures that devices meet administrator-defined criteria before connecting to the corporate network. End-point scanning works in tandem with Citrix® SmartAccess™, which utilizes sense-and-respond capabilities to not only grant or deny access to applications, but also provide **action control** to specify what the user can do with the information. For example, based on the type of device, its location on the network, the end-point status and the user's privileges, organizations can control whether users are allowed to view, print, edit or save information.

SIMPLIFY ADMINISTRATION AND LOWER COSTS

Access Gateway dramatically reduces management complexity and costs. Administrators can quickly and easily install, configure and deploy Access Gateway. User access is delivered without the cost and complexity of installing and supporting client software on each device.

Trust the Leader in Application Delivery Infrastructure

Citrix has been focused on application delivery infrastructure solutions since 1989. Using our experience from working with more than 180,000 organizations, we've developed the Citrix Access Gateway™ family of SSL VPN appliances.

YOUR USERS will enjoy a consistent, seamless application delivery experience, even when they're located outside the corporate network.

YOUR IT DEPARTMENT will say goodbye to the cost and complexity of installing, configuring, updating and supporting complex VPN solutions and client software.

YOUR ORGANIZATION can rest easy knowing that access to corporate applications and data is controlled and secured.

Citrix Access Gateway is the only SSL VPN to securely deliver any application with policy-based SmartAccess control.

Secure, Scalable Access for Healthcare Professionals

St. Joseph Hospital — a 116-bed acute care not-for-profit community hospital located in rural Bangor, Maine, USA.

Challenge: The hospital previously used an IPSEC VPN to provide connectivity for medical transcriptionists working from home. However, this solution presented client management issues,

such as complicated installation and deployment, as well as difficulty for users.

Benefit: St. Joseph Hospital uses Citrix Access Gateway to simplify connectivity for physicians as well as other remote users. Says CIO Ron Crall: "With Access Gateway, you just open a browser and there's no set-up to speak of on the client side. It's something we can walk a user through easily. We're using Access Gateway as our preferred method of connectivity, and the Citrix environment as the preferred method of interacting with the facility from the outside... Having an access solution that is user-friendly and provides a good experience is key to our successful physician outreach and competitive position."

THE BEST SSL VPN TO USE WITH CITRIX PRESENTATION SERVER

Access Gateway can be deployed with Citrix Presentation Server™, the de facto standard for delivering Windows applications at the lowest cost. Presentation Server Platinum Edition includes an Access Gateway Universal user license, allowing any Access Gateway edition to be deployed (appliances purchased separately).

When deployed with Presentation Server, Access Gateway directly replaces the Secure Gateway component, allowing secure, direct connections from Presentation Server clients. Using Access Gateway with Presentation Server delivers the benefits of a hardened appliance, increasing security and extending user access to additional applications and resources.

SmartAccess provides advanced policy-based control of Presentation Server applications and individual capabilities such as print and save. Citrix SmoothRoaming™ allows users to move seamlessly between access locations and devices, automatically adapting access to each unique access scenario.

SATISFY THE MOST DEMANDING NEEDS WITH ENTERPRISE EDITION

Access Gateway Enterprise Edition delivers the scalability, performance and centralized management required to support demanding IT environments. High-availability options ensure business continuity with uninterrupted access to critical applications and resources. With advanced security features such as smart card support, ICSA certification and FIPS 140-2 hardware options, organizations can rest assured that their applications and data remain secure. With integrated Citrix® AppCompress™ technology and SSL hardware acceleration, the Enterprise Edition improves application response time, reducing user frustration and improving productivity.

For organizations with the most demanding needs Access Gateway Enterprise Edition is available as an option on Citrix® NetScaler®, delivering advanced services such as global server load balancing, Web application acceleration and advanced layer 4-7 traffic management. Citrix NetScaler is available as a family of highly scalable, purpose-built appliances.

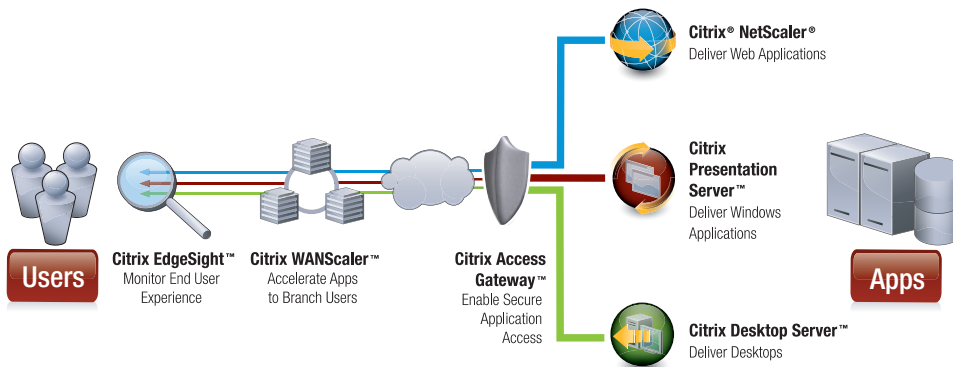

FEATURE	BENEFIT	ACCESS GATEWAY STANDARD EDITION	ACCESS GATEWAY ADVANCED EDITION	ACCESS GATEWAY ENTERPRISE EDITION
Support all applications and protocols	Provides access to all applications and data from anywhere	•	•	•
Web-deployed client	No need to pre-install or manage complex client software, reducing cost of ownership	•	•	•
Citrix Presentation Server integration	Replaces the Secure Gateway feature with a hardened appliance, increasing security and delivering optional access to local applications	•	•	•
Always-on access	Automatically reconnects users to Access Gateway as soon as the network connection is restored. Reduces user frustration when using unreliable networks	•	•	•
Integrated end-point scanning	Ensures the device meets the appropriate standards before connecting, and remains safe for connection to the network	•	•	•
Standards-based security	Information is kept private and protected using standards-based SSL/TLS encryption. Users are authenticated using standards such as LDAP, RADIUS and two-factor authentication	•	•	•
SmartAccess	Policy-based sense and respond technology that determines what resources can be accessed, and how they can be used		•	•
Access Interface	Provides a landing page for users to easily access all of their applications, files, e-mail and other IT resources		•	•
Detailed audit trail	Give administrators visibility into all resources and services accessed by remote users		•	•
Smart card support	Protects resources by authenticating users with standards-based smart cards			•
Integrated high availability	Supports deployment of a high-availability pair of appliances, providing redundancy to ensure consistent access to critical applications and data			•
Role-based and delegated administration	Simplifies management in large organizations by supporting multiple administrators			•
Faster application response	Improve application response time with Citrix® AppCompress™ technology and integrated SSL hardware acceleration			•
Quarantine groups	Provides limited access for non-compliant devices to facilitate quick remediation			•
ICSA Labs certified and FIPS 140-2 appliance options	Meets independent security certification requirements for the highest level of assurance			•

Citrix Application Delivery Infrastructure

Deliver Any Application to Any User with the Best Performance, Security, Cost and Agility

Citrix® NetScaler® for delivering Web-based applications — Optimize all Web applications with an integrated networking solution that accelerates performance, improves security, and substantially reduces load on servers.

Citrix Presentation Server™ for delivering Windows-based Applications — Save millions in management costs and eliminate data security risks by installing all Windows applications in the datacenter and virtualizing or streaming them to end users over the network.

Citrix Desktop Server™ for delivering desktops — Reduce the cost, management and security risk of desktop computing by delivering Windows desktops virtually from the datacenter in a way that actually improves the end user experience.

Citrix Access Gateway™ for enabling secure application access — Provide a secure single point of access to all applications that automatically customizes access policies based on user scenarios.

Citrix WANScaler™ for accelerating applications to branch users — Instantly improve the performance of applications delivered over the wide area network while reducing bandwidth by up to 75%.

Citrix EdgeSight™ for monitoring end user experience — Ensure applications are meeting business metrics at all times by monitoring performance from the user's perspective.

About Citrix: Citrix Systems, Inc. (Nasdaq:CTXS) is the global leader and the most trusted name in application delivery infrastructure. More than 180,000 organizations worldwide rely on Citrix to deliver any application to users anywhere with the best performance, highest security and lowest cost. Citrix customers include 100% of the *Fortune* 100 companies and 98% of the *Fortune* Global 500, as well as hundreds of thousands of small businesses and prosumers. Citrix has approximately 6,200 channel and alliance partners in more than 100 countries. Annual revenue in 2006 was \$1.1 billion. Learn more at www.citrix.com.
